

Persona 1 – Omar (General User)

Profile:

- Age: 22
- Field: General User / Student
- Tech Level: Medium
- Awareness Level: Low to Moderate

Goals:

- Know if a link is safe before clicking
- Avoid account theft and data leakage

Pain Points:

- Frequently receives suspicious links
- Has limited ability to distinguish between safe and malicious URLs
- Prefers simple and non-technical tools

Needs:

- Clear Safe / Danger result
- Fast scanning
- Simple and intuitive interface

Insight:

Most general users have low to moderate awareness but are still exposed to phishing attacks.

Quote:

"Just tell me if it's safe before I click."

Persona 2 – Salma (Security-Oriented User)

Profile:

- Age: 23
- Field: IT / Cybersecurity

- Tech Level: Advanced
- Awareness Level: High

Goals:

- Understand why a URL is flagged
- Validate results using trusted sources
- Ensure high accuracy

Pain Points:

- Does not trust single-source detection
- Needs technical justification, not just a label
- Requires reliable and detailed analysis

Needs:

- Detailed threat explanation
- AI confidence score
- Integration with trusted platforms (e.g., VirusTotal)
- Multiple detection methods

Insight:

Most technical users prefer a combination of AI and threat intelligence rather than relying on a single method.

Quote:

"I need technical justification before trusting the result."

**Persona 3 – Sara (Student User)****Profile:**

- Age: 20–22
- Field: Student
- Tech Level: Medium
- Awareness Level: Moderate

Goals:

- Protect personal data
- Quickly verify links before opening

Pain Points:

- Struggles to differentiate between legitimate and malicious links
- Concerned about phishing, malware, and data leakage
- Needs a tool that is simple but informative

Needs:

- Easy-to-understand explanation
- Confidence score
- Fast and reliable scanning

Insight:

Students need both simplicity and educational feedback to build trust and awareness.

Quote:

"I want to understand why this link is dangerous."
